care

WELL,
DID YOU
**ALREADY
KNOW?**

Do you already know these **facts** and **figures**?

Staff in ward areas take **10,000 to 15,000 steps.**
That corresponds to 8 to 10 kilometres.

13 tonnes

of weight are carried by the legs in a working day.

250 ml

the feet sweat at an average room temperature of 21°C.
The humidity increases the weight of the shoes even more.

600€ costs

are estimated to be incurred daily due to an employee's inability to work

It takes **137 days**

on average to fill a vacancy in the care sector.

**A healthy mind lives
in a healthy body**

Not only mental but also physical burdens have to be overcome in everyday life. Especially in strenuous and challenging occupational fields such as the health sector, health promotion measures and processes are fundamentally important.

In the health sector, employees take responsibility for their patients. As an employer, it goes without saying that they must be enabled to fulfil this responsibility in a fair manner. What could be better than satisfied employees who do excellent work and approach patients and colleagues with a smile?

**Why the wrong footwear
leads to incapacity to work**

According to the RKI, every employee in Germany is on sick leave for an average of about 18 days per year. Around a quarter, especially in the health sector, are due to musculoskeletal disorders and incorrect footwear at the workplace. It is estimated that an employee's inability to work can cost companies up to 600 € per day.

For many healthcare workers, daily mobility and the demanding service to patients is a strenuous challenge. Continuous walking stress in the wrong shoe construction can lead to a deterioration of health and in some cases even to chronic diseases, contrary to professional shoes.

Why certified professional shoes?

Our occupational shoes are light and comfortable and are particularly suitable for nursing professions. They do not have a protective toe cap, but a non-slip, shock-absorbing and antistatic outsole. The abeba occupational shoes are certified according to EN ISO 20347:2012 and additionally, if required, in the area of orthopaedic insoles according to DGUV 112-191. Thus abeba offers full protection for feet that your employees wear all day.

What are the benefits of certified occupational footwear as an employee health promotion measure?

- 👉 Maintain and support the health of employees
- 👉 Reduce absenteeism
- 👉 Reduce costly personnel costs
- 👉 Create safety in the area of electronic equipment
- 👉 Preventive employee appreciation
- 👉 Extend hygiene standards
- 👉 Increase motivation and concentration

Medicine

- High wearing comfort
- Breathable
